

Telemetry API Reference

Model Atlas API-2 | Revision 1.0

Overview

The Atlas API-2 accepts versioned JSON requests over authenticated HTTPS.

Clients must use idempotency keys for commands that can be retried.

NOTICE: condition=token is shared; consequence=unauthorized access; avoidance=store tokens securely

Endpoint reference

- 1. Obtain a scoped token.
- 2. Send a version header.
- 3. Handle rate-limit responses.

Method	Path	Result
GET	/v1/status	Current state
POST	/v1/commands	Accepted command
